

If you've ever found yourself asking this question ...

Why Do I Hurt All The Time?

This special report is for you.

The Informed Consumers Guide To The Amazing Healing & Pain Reduction Powers Of Low Level Laser Therapy

Nothing Is Worse Than Feeling Great Mentally, Only To
Have Your Natural Enthusiasm Smashed Because
The Pain Just Won't Go Away ...

There is another answer ...

Take Your Life Back Today From ...

- ◆ Agonizing arthritis
- ◆ Stiff, aching back
- ◆ Tennis elbow
- ◆ Degenerative conditions
- ◆ Pain associated with aging
- ◆ Damaged cartilage
- ◆ Tender bruises and sprains
- ◆ Painful torn ligaments
- ◆ Inflammatory sports injuries
- ◆ Symptoms of carpal tunnel
- ◆ Sensitive tendinitis
- ◆ Stubborn muscle cramps
- ◆ Prolonged soreness
- ◆ Painful fibromyalgia
- ◆ Strained shoulders
- ◆ Frozen neck
- ◆ Soreness from overexertion
- ◆ Stiff hips
- ◆ Shooting pain of neuritis
- ◆ Aching knees
- ◆ Dull headaches
- ◆ Blinding migraines
- ◆ Inflamed sinus cavities
- ◆ Sore & stiff knuckles
- ◆ PMS bloating & cramps
- ◆ Diarrhea cramps
- ◆ Gastritis and colitis
- ◆ Bone breaks
- ◆ Swollen & painful nerves
- ◆ Spider bites
- ◆ Sunburn
- ◆ And More ...
- ◆ Without drugs!

**Relieve Your
Pain Now!**

“Why Do I Hurt All The Time?”

Nothing Is Worse Than Feeling Great Mentally, Only To Have Your Natural Enthusiasm Smashed Because The Pain Just Won't Go Away.

When you have a problem that is effecting the quality of your life ... a problem that is preventing you from enjoying time with your family ... from living life to the fullest ... you must find someone who can help you solve that problem. Someone who knows your problem even better than you know it.

Don't you feel downright angry because this pain, these symptoms, just won't go away? But don't you also feel somewhat helpless? ... after-all, you've probably tried dozens of “solutions” to your problem ... only to have it rear it's ugly head day after agonizing day.

Some say that if you've been suffering from constant pain, it's not surprising if the pain and agony that you're going through makes you want to cry or even wish you would die sometimes. At the least, it makes even the strongest-minded individual stop and ask why ... “why me ... why do I have to go through this?”

Many people simply give up on a living a normal life and just try to “tough it out”, thinking that “if I ignore it long enough, it will go away.” Unfortunately, this isn't the case. Ignoring your pain will only make it worse over time.

There is another answer ...

So what do you do? What choices do you have? Where do you start?

Answer: You must start by helping yourself to acknowledge the following 4 secrets that most pain sufferers don't know or choose to ignore about their pain:

1. Pain is a symptom ... not the problem.
2. Pain isn't eliminated by drugs (this is the biggest deception.)
3. Your body is equipped with a built in pain removal system.
4. Pain gets worse by lack of maintenance and poor physical health.

Hello, I am Dr. Larry Lytle. Over the last 12 years, I've created a safe, non-drug answer and solution to your pain.

I know you have pain ... at 70+, I have my share of daily pain as well. Some days it's a minor inconvenience - other's it's major "why me?" type pain.

You may be frustrated and confused about your pain. Frustrated because you're tired of living life in pain when you suspect there must be an answer you aren't getting ... confused by the huge number of "pain solutions" available and lack of straight answers from your medical professionals.

Well friend, there is an answer - and for the past 12 years, I've been helping people just like you discover a safe, non-drug alternative solution to their pain. Over those 12 years, I've helped over 7,000 people just like you reduce or eliminate their pain - safely, in the comfort of their own homes - and without any dangerous, life-threatening drugs.

I've devoted a significant portion of my life to helping people just like you find answers to their pain and health problems in safe, non-drug ways ...

* As a practicing dentist for over 40 years (now retired). Did you know that I had to complete much of the same pre-med classes as your doctor?

* With a Ph. D. in Nutrition. As a dentist, I had one of the first (if not only) dental practices in the country to combine nutritional consulting into the treatment protocols. This helped my patients to a better quality of life.

* As a Low Level Laser Therapy Consultant Since 1994. I started studying the amazing benefits of low level laser therapy in the late 1980's, and have been consulting in the field ever since. I dare say there are few in the country with my level of experience and expertise in the field of low level laser therapy ... and NONE with my unique combination of education, skills and experience.

* I've authored five books as well as a low level laser therapy training seminar ...

Healing Light (an AuthorHouse bestseller!)

Low Level Laser Users Manual

Energy Transcendence

Innate Wisdom

Universal Healer, Book 1, Osteoarthritis

Healing Light DVD Seminar

I encourage you to read every word of this report from start to finish. What follows is as good an education on just what low level laser therapy is ... how it works ... and the benefits you might receive as I can give you in this format. After reading these pages, you'll know more about low level laser therapy ... and how it can help you and your family to less pain and better health ... than most everybody you know - including your own medical doctor!

Dr. Larry Lytle, DDS, PhD
71 Years Young ... And Ready
To Help You Lead A Happier,
Healthier, More Pain Free Life!

If you want to go even further educationally than this special report will take you, I encourage you to call the Distributor who sent you this free special report and order one or all of my books and **Healing Light DVD Seminar** - they are invaluable educational resources that will increase your understanding of just how low level laser therapy can assist you in your quest for pain relief.

This report includes answers to many of the actual questions I get asked everyday about my solution to your pain ... answers that have changed thousands of lives.

Plus real stories ... about real people ... with real pain ... so that you can experience for yourself the life-changing benefits available to you.

Let me warn you ... this is a long letter. It has to be because my solution to your pain isn't some "quick fix" deal. Low level laser therapy is a technology that has been producing results for nearly 30 years - but very few people in the United States have heard about or understand it as well as I do.

The good news is that once you've read this special report, you'll have all the necessary information to make an informed decision about whether or not low level laser therapy might be something you want to test for yourself.

So let's get started with the first logical question ... asked by Myrtle West, a wonderfully vibrant 83-year old I first met in 2005. Myrtle was facing pain primarily in the form of Arthritis. Here's what I told her about my "solution" to that arthritis pain. You can read Myrtle's story at left (she has many, many success stories with our solution) ...

"Ok Dr. Lytle, What Is Your 'Solution' To My Daily Arthritis Pain?"

Myrtle's Story, Daily QLaser Use

I'm 83, but simply won't give up my active lifestyle, and sometimes the pain from Arthritis simply becomes too much.

I use my QLaser on a daily basis to help relieve the pain from my old arthritic joints.

I find I'm able to control the daily arthritis pain with just the QLaser, and don't need to take any drugs at all.

The QLaser is one of the best investments in my health I've ever made, and I encourage you to consider it for yourself.

Myrtle West, Berwyn, IL

"Myrtle, I believe that one important component of the solution to your arthritis pain is **Low Level Laser Therapy.**"

LASER stands for ... **L**ight **A**mplification by the **S**timulated **E**mission of **R**adiation. What that means is that a QLaser is a device that projects safe levels of energy into your cells.

You'll learn in a few minutes how safe low level laser therapy and the QLaser products actually are ... for now, trust me when I tell you **there are few (if any) "solutions" to your pain as totally safe as low level laser therapy.**

"Low Level Laser" is a device which emits one watt or less of energy.

Please note that at this level of energy (or less), low level laser therapy has NEVER (in over 2500 clinical research studies) caused any damage to the human cell.

Equally important is the fact that I have designed all QLasers to operate at this totally safe output level.

Low level laser therapy is simply a SAFE and efficient method of delivering a specific type of energy into your cells.

When your cells receive this energy, there are many different reactions that take place (see the chart on the next page) ... and the end result of these reactions is usually less pain and faster healing for you.

In fact, over the past 25-30 years, low level laser therapy has been studied over two thousand five hundred times (2,500)! These studies have proven there are five major cellular changes low level laser therapy helps your body produce - each of which supports cellular healing. I will cover those in just a few minutes.

Please remember that low level laser therapy isn't magic. Many times, people get such miraculous results they think this is some type of "Star Trek" device.

That isn't true - and no therapy - including mine - can solve every health problem or work for every person.

However, in my 12 years of experience, low level laser therapy has helped produce positive results for the majority of our clients, by helping your body get the cellular energy it needs (and some other things) to reduce pain and heal faster.

Most people next want to know more specifics about exactly how low level laser can reduce their pain.

Dr. Mark deDubovay is a chiropractor from CA who has been using laser therapy and our QLasers successfully for years and asks ...

"I Understand That Low Level Laser Therapy & QLasers Are Tools To Help My Body Reduce Pain and Heal Faster ... How Does It Work?"

Think about your pain for a minute ... without worrying about what it's called (migraine, rash, sunburn, etc.)

Regardless of what it's called, where does ALL pain originate?"

It originates at the cellular level doesn't it! All pain ... in fact all human health problems ... originate at the cellular level.

And, as you'll see on the chart on the next page, **QLasers work ... at the cellular level ... to help the body accomplish five major benefits ...**

Here's what all that scientific stuff from the chart means, QLasers:

Most Effective, Versatile & Easy To Use Laser System ...

I have been treating patients with lasers for three years with very positive results. Of all the lasers that I have used and investigated, I've never found a laser as effective, versatile, and easy to use as the QLaser system.

The QLaser's effectiveness has been demonstrated by the remarkable results my patients have enjoyed, including **rapid pain relief (both acute and arthritic), reduction of infections**, to improvements previously unachieved in chronic conditions, such as RSD and Fibromyalgia.

My patients and I thank you for your ingenious innovations and your supportive team.

Dr. Mark deDubovay, DC,
Board Certified Naturopathic Physician

Side Note From Dr. Lytle

"I believe that for most people and in most cases, diagnosis can be a tremendously negative thing. Why?

Because:

- 1. Many times, the diagnosis is wrong.*
- 2. Having a diagnosis may create a self-fulfilling prophecy ... i.e., "the doctor says I have inoperable cancer ... he's got 12 years of college ... who am I to say he's wrong?"*
- 3. Having a diagnosis creates a tremendous amount of FEAR, and fear is a major impediment to healing.*

As you'll see by continuing your reading, with low level laser therapy, it doesn't really matter what is causing your pain, because it all originates at the cellular level"

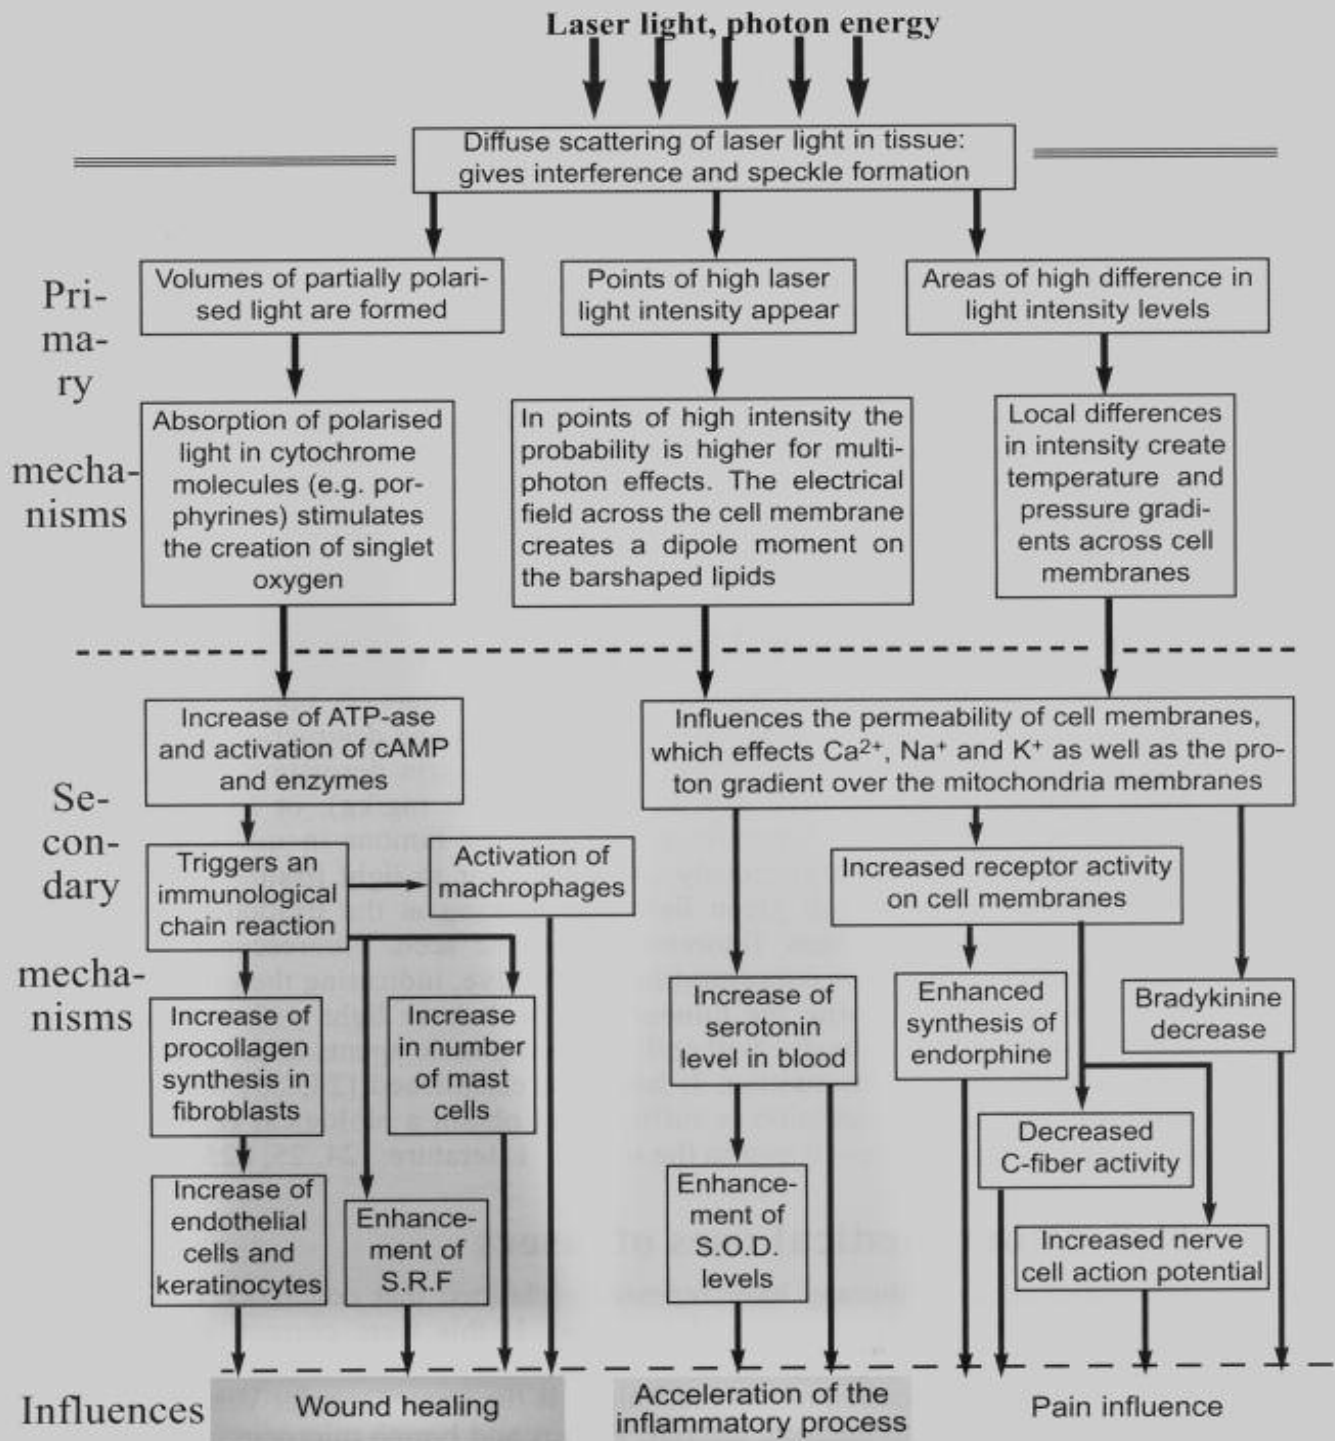

Figure 11.7 The mechanism of laser therapy

Used with permission from, *Laser Therapy, Clinical Practice & Scientific Background*, by Tuner & Hode, Prima Books, 2002

Reduce Pain – by helping to stimulate the production of endorphins – our body’s natural pain reliever.

Reduce Inflammation and Increase Circulation – and both help your body heal faster and more efficiently.

Increase Cellular ATP (the cell’s energy blocks) by as much as 150%. A cell with more energy can heal better and faster.

Increase Cell Membrane Permeability - Nutrients cannot transfer across a de-polarized cell membrane. If the toxins in a damage cell can’t get out – and the nutrients needed to heal can’t get in ... the cell doesn’t heal. By increasing cell membrane permeability, QLaser energy helps the cell to heal faster.

You see, it really doesn’t matter what you call your pain - it all originates at the cellular level - and since QLasers work at the cellular level, it is our belief (we can’t and don’t make specific medical treatment claims) that ***laser energy may be able to benefit nearly any pain you experience.***

And Actually Have Been Shown To Help The Body Correct Faulty DNA - which means that scar tissue can actually (over a period of time) re-generate into healthy tissue!

How Does The QLaser Help Relieve Pain? Please Tell Me More ...

There are four sources of pain:

1. Inflammation characterized by redness, heat and swelling.
2. Muscle stiffness, soreness or spasms.
3. Number three involves toxic conditions caused by various toxins such as lactic acid.
4. And number four is stress or hypertension caused by unpleasant physical or psychological conditions.

Unlike drugs, which target only one source of pain, QLasers can help relieve pain from all 4 sources.

Even better, whereas drugs only relieve pain by interrupting the natural pain impulse (and possibly produce extremely negative side effects - I have more to say about the side-effects of drugs in a minute), QLaser energy goes directly to the source of the pain for relief.

QLaser energy penetrates the skin and muscles all the way to the bone and joints. With increased blood flow (vasodilation), oxygen and nutrients in the bloodstream are able to pass through

Low Level Laser Therapy “Just As Good As Advertised!”

I never thought after 30 years of chronic pain, that I would ever be able to do normal everyday activities again, without feeling like I had thrown something out of alignment!

Now I can exercise the muscles I need to, to build up strength in them. I can see additional improvement with each treatment and now have a goal that seems very possible to reach. **I am truly amazed with the results I’ve experienced with LLLT!**

Marty H., Virden, IL

This Is The Most Profound Therapy I Have Ever Experienced.

In every single pain condition for which I use this miraculous device - regardless of the cause, the condition dramatically improves beginning the almost immediately.

Dr. Nataliya Rakowsky, MD, St. Petersburg, FL

Swollen Nerve In Back Creates Considerable Pain ...

I was diagnosed with a swollen nerve in my back, and was having trouble walking and was in considerable pain all the time. I had tried physical therapy, which provided minimal relief, but only for short periods of time. I was headed for the operating table when a friend told me about low level laser therapy. **After only one treatment I have been pain free since May 2003.**

William Neumann,
Elk Grove Village, IL

the walls of the blood vessels more easily and initiate the process of healing the damaged cells and tissues.

In addition, by increasing cell wall permeability, toxic substances causing inflammation and pain in the damaged cells can then pass back into the bloodstream much more easily. The toxins are then filtered and eliminated by organs such as the kidneys, lungs and digestive tract. As the damaged, inflamed areas receive the increased supply of blood, the cells are nourished and cleansed and inflammation is reduced ... and you experience pain relief.

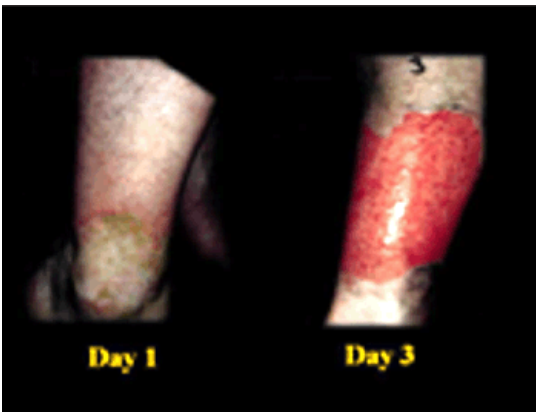

Finally, low level laser energy has been shown to immediately relax and release muscles to relieve tension and pressure on nerves.

Next I'm about to reveal the **#1 most-asked question** ... a question asked by virtually everyone I speak with ...

"I Can See How Low Level Laser Therapy & The QLaser Work At The Cellular Level ... But Will It Work For My _____?"

(Fill in the blank with your specific pain-producing health issue)

Even my son asked the "will it work for my _____", question, when an unfortunate malfunction in his hot tub caused a serious 2nd degree burn on his right leg.

Unfortunately, his hot tub thermostat had malfunctioned allowing the water to reach a skin-blistering 140 degrees ... hot enough to cause the skin on his leg to peel off like the skin of a peach back when my mother used to blanch them before canning.

This was a SERIOUS 2nd degree burn ... with pain as intense as anything you could ever imagine ... literally a 12 on a scale of 1-10. The actual un-retouched photo of the wound on Days 1 and 3 is shown.

Everyone, including Kip's wife, urged him to get to the emergency room for "traditional" treatment of this

extremely painful injury.

However Kip wasn't convinced, because he believed (or wanted to) what I'd been telling him about how the QLaser worked at the cellular level to reduce/eliminate pain, decrease inflammation, increase circulation and reduce the healing time.

So he started immediately lasering the wound with his QLaser two times per day, also using a burn cream to help keep the wound moist.

On the 3rd day, he gave in to his wife's urging and agreed to go to the emergency room and have them look at it.

At the emergency room, it took the attending physician less than five-minutes to look at the burn, prescribe a burn cream similar to what was already being used and give a tetanus shot ... total bill for that 5-minutes “work” - just under \$300 ... \$3,600 per hour!

There is however, one good thing that came out of that long and expensive visit to the local emergency room.

On the way out the door, Kip asked the attending what the “normal” healing time would be for an injury like this (he hadn’t told him he was using the QLaser a couple times per day.)

“Oh, you should be able to get long pants back on in about 4 weeks and total healing will take another 2-4 weeks after that.”

Look at the 2nd set of pictures at left. They are the wound on days 4 and 7 (sorry for the poor picture quality) but you can already see that the wound has started healing.

You might find it interesting that **Kip actually went back to work - wearing long (but loose!) pants on day 5!**

He was able to do this because while the QLaser didn’t completely eliminate the pain from this injury, it did reduce it by at least 50% every time he used the laser. That 50% reduction in pain meant he was able to manage the pain WITHOUT any pain medications at all!

On day 7, the wound was actually SHINY PURPLE in color, with the skin mostly regenerated to the original pre-burn levels. The color indicates how the QLaser was helping the cells to regenerate at the cellular level.

And, as you can clearly see for yourself, the next set of pictures shows the wound nearly completely healed (about like a moderate sun-burn) only 9 days after the injury!

At that point, Kip stopped using the QLaser and went about his normal daily activities. Today, the only indication that Kip ever received that burn is a slight difference in the pigmentation of the skin on his right leg. There was no scarring, and ALL the hair grew back!

Maybe at this point, I should ask you a question:

“Which would you rather have ...

Kicked By A 1300-Pound Horse - Pain 95% Gone The Next Morning ...

Three days ago, I was kicked extremely hard by a 1300-pound horse. The hoof struck and smashed my left hand. I immediately iced my hand for about 15 minutes and then applied the Q1000. I used the Q1000 again later that evening. **The next morning I awoke and was surprised that the pain was 95% gone!** I never imagined that I'd be able to recover so quickly ... especially to an injury of the hand that I use in my practice on a daily basis. The Q1000, in just this one situation, has literally saved me thousands of dollars!

Dr. Terry Shroyer, DC
Junction City, KS

Hip Muscle 'Pops' Causing Excruciating Pain ... QLasers Provides "Break-Through Experience" ...

During a recent yoga class I felt a pull and a pop during the class and realized I had torn my hip flexor muscles. The next morning I experienced excruciating pain (probably top 3 in my life), and by the end of the second day, the front of my hip and portion of my thigh were swollen and bruised. Nothing controlled the pain. I suffered through the week-end, with increasing discomfort, and expected to be slowly recovering from this injury for weeks. On Tuesday I gave myself a 30-minute laser treatment, using the Q1000 QLasers. When I awoke the next morning, I was truly amazed! **I was able to get out of bed with about 80% less pain.** There was absolutely no swelling and I was able to lift my leg for the first time in nearly 5 days. I have no residual pain from my injury and I am actually a little more flexible over that hip flexor now. Using the Lasers was a breakthrough experience for me that saved me from a long and painful recovery.

Dr. Bobbi Jones, DC

'normal' healing times that include dangerous drugs and leaves you living in pain for 4-8 weeks ...

... Or 'QLaser-style' healing that reduced the pain without dangerous drugs and allowed the wound to completely heal in only 9 days?"

Pretty easy to answer isn't it!

Back to your original question, "will laser therapy work for my _____ problem?"

Every time you find yourself asking that question, all you have to do is ask, "does this problem/pain originate at the cellular level?"

If the answer is "Yes", then there is a very good possibility that you might benefit from using the QLasers!

What if Kip hadn't had the QLasers for this burn? The physician likely would have prescribed some type of pain medication ... which brings up the next question I frequently get ...

"What's Wrong With The Way I'm Handling My Pain Now?"

The Shocking Truth About Over-The-Counter Drugs is ... They Don't Really Get Rid of Pain!

Pain drugs are by far the most dangerous "solution" of all ... unfortunately, they are also the most often utilized by medical professionals.

And, what many drug companies don't want you to know is that their drugs do not cure you of what causes pain.

You see, the way these drugs work is to disable, for a short time, your brain's ability to feel the sensation of pain ... the pain is still there ... you just can't feel it. It's like sweeping dirt under a rug. Just because you can't see or feel it doesn't mean it's not there.

The dirty secret about these pills is because you can't feel any pain, your body has no way to stop you from injuring yourself further. Pain is your body's way of saying, "don't do that!" But, there's an even dirtier and more dangerous secret about these pills...

The Nasty Side Effects ... From Even The Most

Common Pain Reliever Can **PERMANENTLY** Damage Your Stomach, Kidneys and Liver.

Sometimes the side effects of these drugs are worse than the original problem! Who hasn't seen or heard the long list of common side effects that the drug companies try to sneak by us in their advertising?

Medication is usually the worst alternative to healing and eliminating pain.

Not only can it make the condition worse, but it can create dependency on the drugs ... and other potentially life-threatening problems. Did you know for instance that ...

... **Acetaminophen** (a common ingredient in over-the-counter pain killers) **is now the #1 cause of liver failure in the U.S.**, or that **NSAIDs and COX-2 inhibitors can DOUBLE your chance of heart attack.**

The main mechanism of these synthetic drugs is COX-2 inhibition. The COX-2 enzyme causes inflammation by stimulating the bad prostaglandins which are hormone-like substances in the body. But, these synthetic drugs can produce bad side effects because the COX-2 enzyme is also necessary for cardiovascular health. Therefore, by eliminating it completely or limiting it too much, adverse cardiovascular effects can occur. And you saw recently what happened with the "approved" and supposedly safe VIOXX – lots of dead people.

I don't care what anyone says - you don't have to live with pain ... and you don't have to rely on dangerous "Black Box Warning" drugs as your only source of pain relief ... Why would anything that is supposed to help us need a "Black Box" warning?

A "Black Box Warning" means that medical studies indicate that the drug carries a significant risk of serious or even life-threatening adverse effects. It is the strongest warning the FDA requires. Just in case you haven't read one, here is the wording that's contained in a normal "Black Box" warning:

Naproxen

NonSelective NSAIDs: Diclofenac potassium, Diclofenac sodium, Diflunisal, Etodolac, Fenoprofen, Flurbiprofen, Ibuprofen*, Indomethacin, Ketoprofen*, Ketorolac[^], Mefenamic Acid, Meloxicam, Nabumetone, Naproxen sodium*, Oxaprozin, Oxaprozin potassium, Piroxicam, Salsalate, Sulindac, Tolmetin

Drug Class Black Box Warning (Pending April 2005; Final Approval January 2006)

Cardiovascular Risk

*NSAIDs may cause an increased risk of serious cardiovascular thrombotic events, myocardial infarction, and stroke, which can be fatal. This risk may increase with duration of use. Patients with cardiovascular disease or risk factors for cardiovascular disease may be at greater risk. (See WARNINGS and CLINICAL TRIALS). *These NSAIDs are contraindicated for the treatment of peri-operative pain in the setting of coronary artery bypass graft (CABG) surgery (see WARNINGS).

Gastrointestinal Risk

*NSAIDs cause an increased risk of serious gastrointestinal adverse events including bleeding, ulceration, and perforation of the stomach or intestines, which can be fatal. These events can occur at any time during use and without warning symptoms. *Elderly patients are at greater risk for serious gastrointestinal events. (See WARNINGS).

A Medication Guide for patients regarding the potential for CV and GI adverse events associated with the use of this class of drugs. The Medication Guide will be required to be given to patients at the time each prescription is dispensed. The Medication Guide will also inform patients of the need to discuss with their doctor the risks and benefits of using NSAIDs and the importance of using the lowest effective dose for the shortest duration possible if treatment with an NSAID is warranted for an individual patient.

And here's a partial listing of drugs in just the "Analgesic" classification with black box warnings (the full list of black box warning drugs is actually PAGES long.)

Celecoxib	Flurbiprofen	Meloxicam
Clonidine(epidural)	Hydromorphone Hydrochloride	Methadone
Diclofenac Potassium	Hydromorphone	Morphine Injection
Diclofenac Sodium	Hydrochloride	Morphine Sulfate
Diflunisal	Hydromorphone Hydrochloride	Nabumetone
Etodolac	Ibuprofen	Naproxen
Fenoprofen	Indomethacin	NSAIDs
Fentanyl (Buccal)	Ketoprofen	Oxaprozin
Fentanyl (Transmucosal)	Ketorolac (Oral, Injection)	Oxaprozin Potassium
Fentanyl (Transdermal)	Mefenamic Acid	Oxycodone (Controlled Release)

And, just in case you might think your local hospital is safe, think again ...

Death by Medicine?

By Gary Null PhD, Carolyn Dean MD ND, Martin Feldman MD, Debora Rasio MD, Dorothy Smith PhD. A definitive review and close reading of medical peer-review journals, and government health statistics shows that American medicine frequently causes more harm than good. ***It is evident that the American medical system is the leading cause of death and injury in the United States.***

Annual Deaths From Adverse Drug Reactions (ADR) - 106,000

(Lazarou, Pomerance. Incidence of adverse drug reactions in hospitalized patients. JAMA. 1998; 279: 1200-1205)

Annual Deaths From ADR & Medical Error - 420,000

(Leape L. National Patient Safety Foundation Press Release. Nationwide Poll On Patient Safety. Oct. 9, 1997)

Pain & Gall Stones Gone After Laser Treatment!

A patient developed terrible pain in the right abdomen - 12 on a 10-point scale.

An MRI showed, "the gallbladder contained multiple large hyper-dense gallstones."

Due to her medical history she couldn't handle a flush, and I was resigned that she would probably need surgery.

I decided to use the Q1000 (Mode 3) over the liver/gallbladder for six minutes on the basis that it might help the cells function better ... and certainly wouldn't hurt.

The patient came back a few days later and the pain and swelling in the abdomen were gone. We used the Q1000 on 3 separate occasions for a total of 18 minutes.

A follow up CT scan (performed to establish the need for surgery) found **Normal Hepatobiliary Scan - the gallbladder was normal and the stones were gone!**

Now that's what I call healthcare!
Dr. Jaison Golojuh, DC, Butler, PA

Hospital errors kill more people each year than either car accidents or breast cancer, and hospital infections kill five times as many Americans as AIDS.

These sure don't sound like any "solutions" I want to give to my children or grand-children ... and I'm sure now that you realize the dangers of these drugs it's no longer a solution for you either!

That's exactly why you need to try something different starting today ... a safe, simple and proven method of becoming pain free!

The QLaser doesn't care what is "causing" the pain ... it doesn't need a diagnosis before it starts helping you ... and you don't have to worry about any "Black Box Warnings" either.

A QLaser starts working at the cellular level the instant you turn it on ... and helps to reduce pain using your body's natural pain relieving methods ... while also working to help your body solve and heal the condition that is causing the pain.

So far you've learned what low level laser therapy is and how it works, as well as why it is a far superior pain solution to the drugs which are traditionally suggested by the medical establishment.

Are you beginning to see the potential benefits for you and your family? Can you imagine the daily minor and major pains which could be made to disappear when you own your own QLaser?

I certainly hope so. Here's another question I get quite frequently ...

“Are QLasers FDA Approved?”

Yes! QLaser is approved for pain resulting from osteoarthritis of the hand. But, let's face it ... I seriously doubt that you care one way or the other if anything is FDA approved or not.

Many think that “FDA Approval” means that the product was/is completely safe. Nothing could be further from the truth... as the recent VIOXX scandal proves. VIOXX was FDA approved and ended up killing lots of people.

The **real question** most people are asking when they ask about FDA approval is,

“Is the QLaser Really SAFE?”

Over the past 25-30 years, low level laser therapy has been studied over 2500 times, and there hasn't been a single study in which the device caused physical problems when used correctly.

And, **QLasers have been tested by Stoneybrook University and have been shown to be incapable of causing damage to the human cell.** That last statement bears repeating ...

The Q1000 Can Do Absolutely NO Damage To Human Cells.

So, the answer to the “are QLasers safe?” question is a resounding ... Yes!

More on the safety issue ... laser devices are classified according to their potential to cause eye damage. There can be Class I, II, III, IV and V, with each higher classification having more risk of eye damage.

The Q10 and the Q1000 are Class I laser devices. What does this mean? **A Class I laser device is defined as “a non-significant risk device.”**

Amazing and as hard to believe as it may seem, the Q10 and Q1000 are safe enough to use on your eyes over closed eyelids!

But don't believe me, look at what Patricia Knox of Houston, TX has to say about the Q1000's effects on her son's vision!

To recap ...

“These results strongly suggest that [QLasers] are truly safe for human use ... when employed at the maximum recommended exposure period. These results and data are fully consistent with the type of results frequently sought by Federal agencies as evidence of safety and tolerance when the devices are used as recommended.”

Report on the safety of the original QLasers by Sanford Simon, Professor of Biochemistry & Pathology, State Univ. Of New York at Stonybrook

Q1000 Improves Vision!

My son Steven used the Q1000 mode 1 on his eyes (closed eyelids) for one minute every other day. He just happened to have his annual eye exam scheduled approximately 30 days after we purchased the Q1000.

His optometrist wanted to know what he had been doing because **he was significantly less nearsighted than at his last visit!**

Patricia Knox, Houston, TX

From Tuner & Hode's Book, Laser Therapy, Pg. 99, 3.6.2 Cancer. Can LLLT Cause Cancer? ...

The answer is no. *No mutational effects have been observed resulting from light with wave-lengths in the red or infrared range in doses used within LLLT. What happens if I treat someone who has cancer and is unaware of it? Can the cancer's growth be stimulated? The effects of LLLT on cancer cells in vitro (test tube) have been studied, and it was observed that they can be stimulated by laser light. However, with respect to a cancer in vivo (in the body), the situation is rather different.*

Experiments on rats have shown that small tumors treated with LLLT may recede and completely disappear... The situation is the same for bacteria and virus in culture. These are stimulated by laser light in certain doses, while a bacterial or viral infection in vivo is cured much quicker after the right treatment with LLLT.

Pg. 116, 4.1.5. Cancer. *As explained previously, LLLT does not cause cancer. There are, on the contrary, indications that cancer tumors in their initial stage can be positively influenced (i.e., to the patients benefit) by LLLT.*

"Low level laser therapy is a technology that has been proven safe in thousands of clinical studies ... and QLasers have been proven safe by a respected educational institution ... and both the technology and device have been proven to work at the cellular level to help the body alleviate pain and heal faster."

A related question I'm sometimes asked is,

"Can Low Level Laser Therapy Stimulate Cancer Cells?"

Laser research has indicated no possibility of promoting cancer growth when using our type of non-stimulating laser.

Two of the most respected authorities in the low level laser therapy field are Tuner & Hode. Their book *Laser Therapy* is a very respected source of information about LLLT.

At left is a quote from Turner & Hode's book "*Laser Therapy*" which should help ease any "LLLT causes cancer" concerns you might have.

So far, you've learned that QLasers are (1) effective at the cellular level, (2) reduce pain from virtually any source, (3) safe, and (4) protect you from the real dangers of pain medications, and (5) can't cause cancer.

What About Insurance - Is Laser Therapy Covered?

Taking personal control of your health with alternative therapies like low level laser usually means paying cash. And low level laser therapy is no different. At this time, I'm not aware of any insurance company that covers low level laser therapy treatments.

But that's a good thing, because when you pay your own way, you can't be controlled by the insurance company ... they can't tell you who to see, when, or how often. You get to chose.

Insurance companies really get my blood pressure up. They don't appear to be interested in our health or lives ... just the least expensive (and sometimes least effective) option for any particular health problem.

Take Carpal Tunnel Syndrome as an example. **Did you know that low level laser therapy was FDA approved for CTS over five years ago?**

In double-blind clinical studies for the FDA approval application for Carpal Tunnel, the laser group showed something like a

78.57% improvement (versus less than 30% improvement for the placebo group).

Now, if you have CTS and go to your insurance company, you can probably get reimbursement for drugs, some form of wrist brace or surgery ... but they won't pay for laser therapy.

CTS surgery runs between \$4,000 to \$7,000. According to many sources, full restoration is achieved in less than 60% of the cases ... and ... is it not uncommon for CTS symptoms to return within two years of surgery – in which case, surgeons ... will consider performing a second surgery for you.

Amazing isn't it. Certain portions of the American medical establishment seem to think that multiple surgeries for the same problem ... is normal!

And who pays for all this? **YOU DO** in the form of higher and ever higher insurance premiums (so you might as well pay cash and get what you want in the first place.)

Laser therapy is a treatment protocol shown to be over 78% effective for Carpal Tunnel Syndrome ... has been "approved" for over five years ... an entire system can be purchased for about the same price as a single surgery (and used for many other problems besides CTS) and get this ...

... because of the risks associated with the invasive nature of surgery, most surgeons, *medical insurance companies and health-care professionals advise patients to exhaust all clinically documented conservative treatments for CTS before considering surgery.*

Translation - healthcare professionals suggest "clinically documented" conservative treatments ... like low level laser therapy before surgery ... and yet ...

Laser Therapy Still Isn't Covered For CTS By A Single Insurance Company I'm Aware Of.

It doesn't make any sense to me – and probably doesn't to you either.

The reality of the situation is that QLaser therapy is a safe, clinically documented and conservative treatment alternative that has been proven to be effective – you're just not going to get your insurance company to pay for it yet.

If the "no insurance" thing is a slight issue for you, that's ok. On the other hand, maybe you're like me and fed up with your

According to the National Institute of Neurological Disorders and Stroke, **the average lifetime cost of CTS (including medical bills and lost time from work) is estimated to be \$30,000.**

Carpal Tunnel Pain Gone In Six Minutes! ...

My friend suffered from severe carpal tunnel syndrome and tendinitis in his elbow. I applied the Q1000 Laser on his arms and elbow for 6 minutes. He was willing to try it since all conventional medicine had failed him. The next week he called after a day of using a jack hammer to break up - which usually left him virtually crippled the next day.

He explained to me that he no longer was using pain medication to help him sleep and that he was able to work the whole week w/o any residual pain from his carpal tunnel syndrome and tendinitis. **He attributed this (to his amazement) to the Q1000 Laser treatment on his arms and elbow.**

Daniel Schainen, Cuvler City, CA

My QLaser Has Never Disappointed Me!

I purchased my laser in Feb 2003 and have been using it consistently on a variety of medical problems. **I have found it very effective in treatment of headaches, carpal tunnel, frostbite, wounds, ankle sprain, and joint pain.**

A friend who has been in pain due to broken wrists has been treated 2-3 times a week and is usually pain free and is no longer taking oral pain medication.

Jill Cowan, Ontario, Canada

Satellite Review ...

We've covered quite a bit of ground, so let's take just a minute to review what you've learned and now know:

1. I've been working in the field of human health and energy for over 40 years.
2. Low level laser therapy (LLLT) is a technology that has been in use for 25-30 years.
3. The QLasers I developed have been in use for 12 years, and have helped thousands of people around the world.
4. LLLT works at the cellular level.
5. LLLT helps your body Reduce Pain by stimulating the production of endorphins.
6. LLLT helps your body Reduce Inflammation and Increase Circulation.
7. LLLT helps your body Increase Cellular ATP - your cell's energy blocks.
8. LLLT helps your body Increase Cell Permeability so toxins can escape the cell and vital nutrients get in.
9. LLLT may even help your body Correct Faulty DNA.
10. Pain medications are bad, dangerous and may cause permanent damage to your body ... definitely not your best choice.
11. Hospitals aren't any better ... hospital errors kill thousands every year.
12. QLasers are safe. The Q10 and Q1000 can do no physical damage to your cells.
13. LLLT at appropriate levels cannot stimulate cancer cells.
14. At this time, even though it is incredibly effective therapy, most insurance company's do not cover LLLT.

A good start, but there's more great information to follow ...

insurance company anyway.

Either way, **most of our QLaser family members have zero regrets about spending their own money for their QLaser.**

Here's my all-time favorite question! During a discussion with "Fran" (name changed to protect her identity in case her husband reads this!) about insurance issues, I could hear her husband in the background, and he kept pestering her to,

"Find Out How Much That Star Trek Laser Doo-Hicky Costs."

First of all, **I want to make it completely clear that low level laser therapy and the QLaser product line ARE NOT some type of magic "doo-hicky" from the future that will instantly fix any problem you might have.**

If you were a Star Trek fan, you might recall "Bones" waving the Tri-coder over a broken arm, and it miraculously and instantly heals ... the QLaser will not do that.

However, low level laser therapy and the QLaser do work on scientifically proven principles, and can help many different types of problems.

Secondly, let me ask you to consider the idea that cost is relative.

If The Qlaser Could Magically Eliminate All Your Pain And Instantly Heal All Your Wounds, Wouldn't It Be Worth Whatever You Had To Pay To Get One?

Third, there is a cost to every action ... or non-action ... you take.

Use drugs to combat your pain, and you might end up paying the high-cost of a heart-attack, liver failure ...

... or even the ultimate cost ... your life.

Do nothing and you pay the high cost of living a life dulled by constant, enthusiasm-smashing, brain-numbing pain.

So to answer my favorite question of all time, **while QLasers are not "cheap", there is a model for virtually every budget.**

One price issue that seems to be persistent amongst prospective QLaser family members is the tendency to forget (or not realize) that **your QLaser**

is an investment in your good health.

And, like most investments, your cost of ownership should be spread over the life of the investment.

For instance, you wouldn't make a rental real estate investment decision based only on the initial price of the property would you.

You would amortize the initial cost over the expected property life, and base your investment decision on the "net" annual return (annual income less annual expenses.)

The same procedure holds true for your QLaser investment. **Your QLaser has an expected life-span of at least 10 years.** How do I know this? Because I have QLasers that were sold 10 years ago still in use today!

So if you divide your actual QLaser investment by 10 (it may last even longer!), you'll have your cost per year. If you do this, **you'll find that owning a Q1000 costs you less than a cheap cup of coffee per day!**

Further, divide your total annual cost by the number of family members who will be using the QLaser ... (just like you would add the income from both sides of a duplex in the rental real estate example) ... the result is the "QLaser cost per year per family member". In this case, **for a family of 4, you're literally talking about a cost of about a gum ball per day per family member!**

Never forget ...

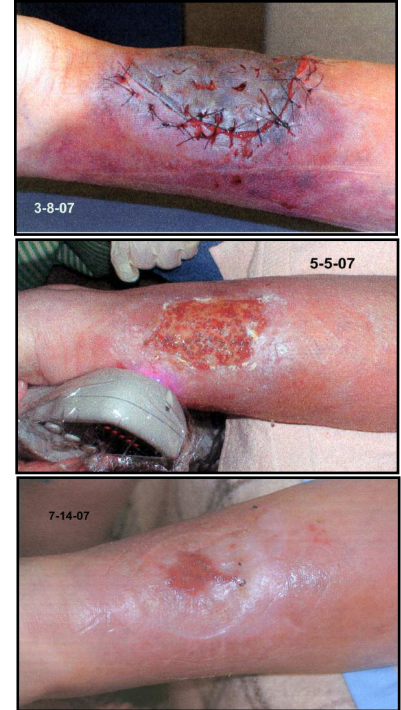

Results & Good Health Are More Important Than Price

Here's another question I get asked by nearly everyone I speak to:

I Can See The Benefits Of The QLaser, But I'm Mainly Interested In It For "X" ... What Happens When I Get "X" Healed, Is My QLaser Going To Sit On The Shelf?"

Initially considering the QLaser for one specific health/pain problem is very common ... and the QLaser can probably help you with most of these "major" issues like:

- | | |
|------------------|----------------------|
| Arthritic Joints | Low back pain |
| Migraines | Bone Breaks |
| Tendon ruptures | Joint Replacements |
| Surgery | Major Accidents |
| Major Burns | Wounds of all nature |

Q1000 Helps Heal "Explosive" Wound With No Infection or "Divot"!

My 83-year old mother-in-law had what the doctor described as an "explosive wound" on the back of her left calf. The doctor stitched the wound up and told us to expect this to take a LONG time (as long as a full year!) to heal on a patient this age. He was also very concerned about the likelihood of infection, and also cautioned my mother-in-law to expect a "divot" in her calf after the wound had healed. We lasered the wound with our Q1000 on a daily basis and **the results have been nothing less than tremendous! No Infection. No "Divot".** And a total healing time of just over 4 months (versus the doctor's opinion of up to one year.) Needless to say, we are very happy! Thank you.

Sue Hoadley, Dearborn, MI

A Tool For The Entire Family!

Her migraines usually last for three days, but **just one three minute cycle stopped the pain in its tracks.**

I sorted out my husband's tense muscles, and dealt with my son's painful knees from too much rugby. At first he was skeptical about the Q1000, but when he found he could run outside and play rugby after each treatment, and be pain-free, he soon changed his mind. Now when he comes home from rugby with injuries he goes straight to the Q1000.

Shauna Seddon
Warrington, England

However, most of the "major" issues above would be defined as "chronic" pain issues - something you've been dealing with a long, long time.

The QLaser can (and has) helped thousands with these types of problems. When something "major" like this happens our tendency is to focus (and rightfully so) our efforts on solving the major problem.

But let's face it, **pain is a pretty common part of most of our daily lives.** We all face these (and more) "minor" pain creators on a regular basis:

Sunburn	Cold sores	PMS
Muscle tears	Headache	Bruises
Mosquito bites	Spider bites	Rashes
Sore Throats	Hang Nails	Minor Burns

So another area where the QLaser shines is what it can do for you and your family on the daily, "minor" pain issues.

I tell our QLaser family members, **"If you aren't using your QLaser on a daily basis, you're not taking full advantage of it's pain relieving capabilities."**

And if you have kids ... "forget about it!" ... you'll definitely be using your QLaser every day of the week! Look at the pictures at left of little Logan Rex ... and then imagine the outcome if dad Troy hadn't had access to a QLaser ...

*"Logan evidently climbed up on the riding lawn mower and fell off, catching his left arm on the exhaust muffler. It burned him pretty badly. Three days after it happened I was able to get a QLaser treatment for Logan from my chiropractor. **I am totally amazed at how FAST this wound healed.** The pictures are the 1st treatment, 3 days after the accident. The 2nd picture 7 days later. And the last picture is 2 weeks later. AMAZING !!!!! Thanks goes to Dr.Fite for allowing us to use this marvelous tool...God Bless to you both..... Troy Rex"*

Can't you literally FEEL the searing pain little Logan experienced ... it's not pleasant to even think about it.

Maybe after seeing Logan's pictures you can understand why I believe that every medicine cabinet should have a QLaser ... just imagine how much he suffered during the 3 days before his first QLaser treatment.

Accidents like Logan's are one prime reason why I never go anywhere without my QLaser, because the best time to get maxi-

mum QLaser benefit for an accident like Logan's is immediately after the injury.

Let's shift gears for a minute. We've been answering many of the questions that are "normal" when you are considering an investment of this scope.

At this point, potential QLaser family members usually have a pretty good handle on what low level laser therapy can do for them - you should as well - and the questions shift to the differences between QLaser products and our competitor's products.

"Are All Lasers Created Equal? Will They All Do The Same Thing?"

Absolutely not! There are several different major areas to be aware of, and it will take just a minute to run through them.

Laser vs. LED

The first difference to be aware of is to determine whether or not your looking at an actual laser device ... or something that is just an LED.

Laser is coherent light, meaning that all the photons line up in the same pattern. An LED is non-coherent ... like the light bulbs in your house.

Both can produce health benefits ... but coherent laser light will penetrate deeper into the tissue than LED light. Paraphrasing Tuner & Hode, *"in a review of recent studies, the benefits of LED's are proven ... however, while laser can do everything LED can (and more), the same cannot be said about LED."*

How do you tell the difference?

Price is the most obvious key. If you are looking at something on late night TV that sells for \$149, it is most likely an LED-only device.

Another method is to ask the QLaser distributor that provided you with this report. They are provided with an extensive database of LED and laser products, and if you are comparing other products, they would be happy to speak with you about them and try to give you the actual differences.

Additionally, most competitor's products give you an "either/or" choice ... either you get laser ... or you get LEDs ... but rarely do they offer both LED's and lasers in the same device.

Because both laser and LED have proven beneficial, the

Excruciating pain gone!

I am a 78-year-old woman who suffered from excruciating pain for 25 years. My posture was stooped and my right foot was twisted out beyond the normal range of motion.

After my first experience with the Q1000 laser and the Enhancer, I immediately felt lighter—not the heavy feeling I learned to live with. **All**

pain was gone in minutes.

As I stood up, I found that I stood erect and noted that my foot was now in the normal range, allowing me to walk with ease. I no longer live on pain medication.

Name withheld by request,
Nevada

18-Year Old Brown Recluse Bite Ulcer Healed with Q1000!

A patient of mine has lived with an open ulcer (from a brown recluse spider bite) the size and depth of a quarter for the past 18 years (imagine the constant pain he must have felt!)

He has suffered from agonizing and life-threatening staff infections on 10 different occasions. And his insurance company has paid out over \$90,000 (imagine the thousands the patient must have paid in deductible and co-payments) over the 18 years trying to find a solution to his problem.

Over a 10-day period, I was able to treat the ulcer with my QLaser system a total of two times (20 minutes total treatment time.)

On the 10th day, the patient returned ... and the bite ulcer was completely healed! Amazing!

Dr. Gary Guest, Bozeman, MT

Q10 and Q1000 QLaser products contain BOTH LED's and true laser diodes ... the result is one product that combines the best of both worlds.

Wavelength

Wavelength is the “hardware” of the laser. A diode’s (either a laser or led diode) wavelength (measured in nanometers) is set when the diode is manufactured - is generally accurate to +/- 3 (at least in quality products), and can’t be changed.

Laser research conducted over the past 25 years has shown pain control and healing benefits from many different and unique wave-lengths.

When I was creating my first QLaser, I researched all the clinical studies I could find ... and all the laser therapy products available at the time. My research led me to ask a simple, “common sense” question you might also be thinking of:

“If the clinical research on low level laser therapy showed positive benefits from numerous wavelengths, why did virtually every single device I could find only offer one wavelength?”

One of my favorite success stories! ... **Paralyzed Cub Saved With Portable QLaser**
 Baby Bear, a black bear cub, was found unable to move at the base of a large oak tree in MN. Both a DNR field officer and a vet recommended that Baby Bear be destroyed. The Q1000 and 808 Enhancer were applied directly over the broken back once per day. In 2 ½ weeks Baby Bear was no longer dragging his hind legs had some movement of his paralyzed legs. Baby Bear began sitting up after only 3 weeks of laser therapy, and was able to stand on all four legs with the help of the wall of his pen. After just four weeks of applying the Q1000 and 808 laser enhancer, Baby Bear was walking, eating and continuing to improve. **Baby Bear “hibernated” in the trailer over the winter and was successfully released back to the wild the next spring.**

Common sense would dictate that if benefits happen from multiple wavelengths, companies would want to utilize all the beneficial wavelengths in their laser products ... wouldn't it?

Apparently common sense isn't so common.

Because most of our competitors limit their products to one or two specific wavelengths - and no, I don't know why they do this, other than perhaps as an effort at your health expense to save money on production costs.

On the other hand, I designed QLaser products to include ALL of the major beneficial wavelengths I found while reviewing the research! So, the Q1000 contains 7 unique and beneficial wavelengths ... again, all of the major wavelengths that were shown to be beneficial in the research.

If you're speaking to another company's representative, make sure to ask them how many wavelengths their product has.

Frequency

Frequency is the “software” of the laser. Basically, frequency is the number of times per second the laser or led diode turns on/off or pulses per second. Frequency is measured in hertz.

Frequency DOES NOT change the diodes wavelength.

So if you have a 635 nanometer laser diode, with the correct hardware/software, you could essentially pulse it any number of times per second ... but it will always be a 635 nm wavelength.

Results have shown that frequency may be an important addition to multiple wavelengths in dealing with different health issues.

Because frequency may be important, both the Q10 and Q1000 QLaser products have frequency capabilities built in.

For example, *in “Multi-Organ Mode”, the Q1000 cycles through 29 unique frequencies.* Each of these 29 unique frequencies is delivered across all 7 wavelengths present in the Q1000. This means that during each 3-minute cycle, the Q1000 operating in multi-organ mode will **present the cells in your body with a whopping 203 combinations of wavelength and frequency (7 wavelengths x 29 unique frequencies).**

Compare that to the majority of our competitor’s that may be delivering 7 or 8 frequencies across one wavelength (8 combinations of wavelength and frequency.)

Number of Diodes

The number of diodes a product contains is important to you for a couple of reasons, (1) more diodes means more possible wavelengths of healing energy, and (2) more diodes means a larger coverage area for faster treatment times.

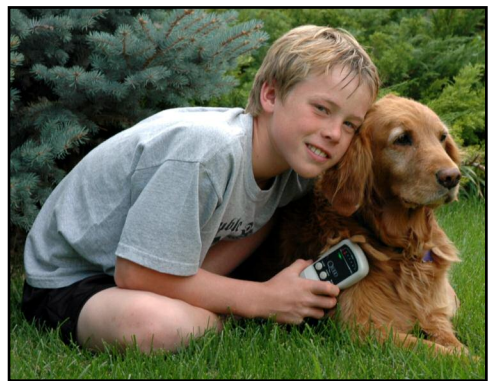

Except for pure LED products, most of our competitors products have a maximum of 4 laser diodes. One competitor with only 4 laser diodes sells for a whopping \$12,500!

The QLaser product lineup includes models containing from 1 to 20 diodes ... offered at a fraction of the price of competing products!

Ease of Use

What good is a product that isn’t user friendly? I have a TV set with a built-in DVD player/recorder, but danged if I can figure out how to make it record my favorite shows ... therefore it is of absolutely no value to me.

The same holds true for any low level laser therapy product you are considering - if it isn’t easy and intuitive to use ... if every time you want to use it, you have to read the manual ... again -- you will be much less likely to use the product. I’ve made QLasers so easy to use that my grand kids (that’s Brennan at right - he’s 11 and uses his QLaser

Computer Specialist Gets “Repaired” While Fixing My Computer

Char, a computer specialist, was fixing my computer when I noticed she was wearing a leg brace. I reached for my Q1000, and while she continued to work, treated her leg over the brace. **After one 3-minute session, she looked up and asked, “What are you doing there? This is wonderful, it doesn’t hurt anymore!”** She took her leg brace off, stood up and said, “I can walk without any pain at all!”

Eugene Lachocki
Edgewater, FL

Back Pain Gone Instantly!

I felt wonderful after my first low level laser treatment. **All my mid-back pain has gone away instantly with this new treatment.** I can’t remember ever being totally pain free before, even with regular chiropractic adjustments. It also gave me a tremendous amount of energy. It’s like there is this energy in my spine now.

Marcia M., Taylorville, IL

Severe Rash & Pain Improves 75% With One Treatment...

A patient presented to my office with an unexplained and horrific-looking and very painful rash on the back of her neck. She received a corticosteroid injection at that time for pain relief and as an anti-inflammatory.

I treated her with the Q1000 for a total of 9 minutes.

I saw her for a follow-up visit in 48 hours [photo 2], and **the pain and redness had decreased significantly only 1 hour after the initial Q1000 session**, and that the rash was 75% improved with one treatment. Carpe diem!

Todd W. Austin, D.C.

No Aspirin For This 10 Year Old!

Derek (age 10) played 5 games of soccer last weekend in one 24-hour period.

It's kind of cool how, when his feet were hurting, he didn't want any aspirin ... just our Q1000 laser!

Buker Beaumont, Rapid City, SD

every day) can and do use them themselves!

Portability

Portability in your laser product is more important that you might first think. Here's why.

Pain producing injuries rarely occur at home. And research has shown that **the faster you can get laser energy to the injured site, the better healing results you will have.**

So I tell our QLaser family members to take their QLaser with them where ever they go. By doing so, they always have the QLaser available when they need it most.

A couple of pages back, you saw the story of the bear cub with the broken back ... can you imagine trying to save that cub's life with some type of plug in device? You can see from the middle picture above the rancher is actually lasering the cub inside the horse trailer.

That is the benefit of portability!

To make this type of portability possible, the QLaser family are powered by strong, long-lasting Lithium-ion batteries, that allow you to **take the QLaser (and included charger) with you where ever you go.**

The Q10 and Q1000 are both about the size of your television remote control (but a little bit thicker). The 660-Enhancer and 808-Enhancer are both about the size of a large fountain pen.

All four fit very nicely into our custom-designed and compact QLaser carrying case for "take it anywhere" portability.

Personally, I never go anywhere without having one of my lasers in the car. You just never know when someone is going to sprain an ankle or receive an injury ... and I always want to be ready ... just in case.

Safety

We've already spoken quite a bit about safety, so I only want to mention one other thing for you to consider here. Some competitors are coming out with **Class IV lasers** (remember the classification levels I told you about earlier?), believing they need to BLAST the energy into the cell to be effective.

Nothing could be further from the truth, and **in my opinion, these products ARE NOT SAFE** and should be avoided (I've actually heard substantiated stories of these Class IV devices set-

ting animals on fire.)

Laser therapy results can be achieved with very subtle and safe levels of laser energy. In fact, with regard to laser therapy ...

More Is NOT Better.

The QLaser Q10 and Q1000 - both exceedingly safe Class I laser devices - achieve penetration of the energy to any point in the body via superior engineering. And both are engineered to create ...

Soliton Waves

I confuse a lot of people here ... because this is “Star Trek” type science and hard to believe! So rather than believing me, please take a minute now to read the information at right about soliton waves which was published in James Oschman’s book *Energy Medicine, The Scientific Basis*.

A soliton wave is a wave that occurs when two or more unique, solitary waves combine to form a wave - not of higher energy - but of higher amplitude.

This higher amplitude wave is able to easily penetrate to any point the energy is needed in the body ... without the dangers associated with some of our higher powered competitor’s products.

The good news for you is that **the Q10 produces at least two soliton waves ... while the Q1000 produces at least six!** What all this means in plain English is that the energy created by the Q10 and Q1000 QLAsers penetrates to any point its needed in your body, safely and effectively.

Other Factors To Consider

Product Quality. In 12 years of business, and with over 7,000 individual units sold, QLAsers have had **less than 1% returns due to manufacturing defects.** All QLAsers Are **Made In The U.S.A..**

Product Warranty. **All QLAsers come with our standard two-year warranty against manufacturing defects, which may be upgraded (small additional charge) to a full five years.**

What’s more, a portion of all QLaser sales goes directly into a “Laser Repair Trust Fund” set aside specifically for future warranty repair needs. This trust fund is another assurance that warranty repair services will be there if you need them.

I think you’ll agree, that is a lot of benefits packed into one

Soliton Waves

A soliton wave is a special type of non-linear light wave that never changes shape or speed as it travels. A soliton can trap an electric charge and carry it along. Once the soliton is formed, this charge transfer does not require further input of energy - thus a sort of super conductor is created.

It turns out that **a soliton wave is very robust, continuing undistorted through objects such as fiber optics, water, air and the human body.**

Soliton waves have been observed in nature since before the 20th century. However, in recent years, scientists have discovered solitons in many other contexts - and that they resemble nerve impulses in the body. Various therapists have noted wave resembling solitons appear from time to time in the body and appear to have beneficial effects.

James Oschman
Energy Medicine, The Scientific Basis

QLaser System Relieves Pain From Knee Replacement

9 days after a total knee replacement I was trying to control the pain and swelling with a combination of drugs. After 2 more days of agonizing pain my wife suggested we use the Q1000 / 808 Enhancer combination. Usually skeptical regarding these matters, I accepted the treatment as I was experiencing such severe pain. **The result was miraculous - I felt almost immediate pain relief.** Over the following 48 hours I used the Q1000 and 808 Enhancer three times a day to control the pain and reduce the inflammation.

Michael Dean, London

small and portable device. But there are even more reasons the QLaser is your #1 choice in low level laser therapy ...

Maybe most important reason is The System.

Because for many people (but depending on your specific needs), One “Do Everything” Laser Is Usually Not Enough.

Most of you understand at a basic level that *no single tool can do everything.*

For example, as much as I love the versatility of Duct Tape (I particularly like the new, super-sticky Gorilla brand!), in a broken pipe plumbing scenario, I think you’ll quickly agree it is a poor substitute for a new piece of replacement copper pipe soldered tight and leak-free.

The same is true of low level laser therapy – even for the patented QLasers.

Each component of the QLaser product line is designed for it’s own unique purpose.

The Q10 and Q1000 are harmonizing and relaxing lasers, designed for soft tissue and organ use. The Q10 delivers 2 joules of mild energy per 3 minute cycle, where as the Q1000 delivers 7 joules of energy (still harmonizing and relaxing, but more energy delivered because it has more laser diodes and leds) during the same 3 minutes.

The Q10 and Q1000 are perfect for

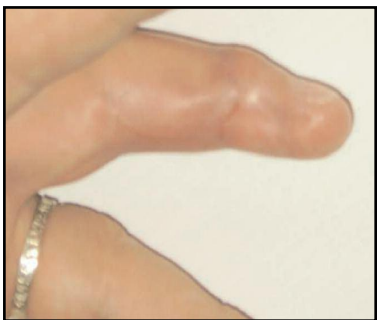

- * Releasing and relaxing tight muscles
- * Headaches/migraines
- * Soft tissue (muscle) pain and injuries
- * Your bodies organ systems

The 660 Enhancer is mildly stimulating and works wonders to release trigger and myofascial points ... and is a superb replacement for needles in non-invasive laser acupuncture. The 660 Enhancer delivers 7 joules of energy per 3-minute cycle but over a much more concentrated delivery area (a little bit smaller than a dime) than either the Q10 or Q1000.

Research has shown that triggering acupoints requires the delivery of approximately 1 joule of energy – the 660 Enhancer accomplishes this in just under 30 seconds, making it a super-fast replacement for traditional 30-45 minute needle acupuncture treatments.

Finally, the 808 Enhancer is the stimulating component of the system, and is designed for use in hard tissue situations (cartilage, tendon, liga-

QLaser Saves Finger From Amputation

Jonathan's finger joint became infected with streptococcus bacteria. He underwent two different surgeries to correct the situation. The doctors told him to expect to lose the finger. Two days after leaving the hospital, he learned about the Q1000, and deciding he had nothing to lose, started using the Q1000 3-minutes per day. Almost immediately the hospital staff remarked how well the wound was healing. Picture three above is the wound only 31 days after starting QLaser treatments! "Far from making things worse (as the hospital had told him the laser would), **QLaser therapy probably saved my finger from being amputated.**"

Jonathan Martin, London

ment, bone and nerve). The 808 Enhancer delivers a whopping 54 joules of energy per 3-minute cycle, over the same concentrated area as the 660 Enhancer.

Research has shown that due to dense tissue structure and low blood flow, hard tissue (cartilage, tendon, ligament, nerves and bone) needs greater levels of stimulation to produce beneficial results. The 808 Enhancer provides these levels of stimulating energy in only 3 minutes.

Finally, you'll also probably understand and agree that most health problems today are multi-factorial, meaning you usually have BOTH hard and soft tissue structures and components involved with the pain-producing problem.

This is specifically why many people will want and need a low level laser therapy SYSTEM rather than just a low level laser.

Take Carpal Tunnel Syndrome. The typical person suffering from Carpal Tunnel will experience pain in the fore-arm and numbness in the hand/fingers. The pain in the fore-arm results when the muscles (soft tissue) of the fore-arm tense up. The numbness in the fingers and hand result when the Carpal nerve (hard tissue) gets compressed in the Carpal Tunnel (most often due to inflammation).

To most effectively treat Carpal Tunnel, you need a **System** that (1) relaxes and releases the tense muscles in the fore-arm (i.e., the Q10 or Q1000), and (2) stimulates the Carpal Tunnel nerve (i.e., the 808 Enhancer)

Remember what Dr. Mark deDubovay said earlier? ... **"The QLaser Is The Most Effective, Versatile & Easy To Use Laser System ..."** And he meant system because he understands the necessity of using the right laser ... usually multiple lasers ... for each pain producing problem.

No Single Laser Can Do Everything ... But With QLaser, You Have Multiple Tools ... That Create A Low Level Laser Therapy System ... Providing You With The Right Tool For Virtually Every Health Problem You Encounter.

Are there more benefits to the QLaser system? You bet ... keep reading. Another common question in my discussions centers around what happens after your purchase.

"OK, Let's Say I Invest In A QLaser ..."

Will I Be Able To Use it Myself? What Happens When I Have Questions?

Absolutely! One of the factors I insisted on when creating the QLaser products was that they be extremely user-friendly and easy to use. In fact, they are SO easy to use that all of my grand kids have been using QLasers themselves since age 7 or 8.

Post-purchase questions are a fact of life with this type of product, and the Distributor you buy your QLaser from has been trained to answer any and all post-purchase questions you may have ... and to provide you with all the support you need to get maximum benefit from your QLaser.

If you have a question they can't answer, they are trained to bring it directly to me, and I'll do my best to answer your question for them.

If you ever have problems with your QLaser Distributor, you should contact my son, Kip Lytle, whose company **QLaser Solutions** is the International Master Distributor for the QLaser product line. Kip's direct number is 605-342-5669, ext 13, and he will do his best to help you with any problems you have as well.

As I near the end of this QLaser special report, I want to leave you with a couple last thoughts. I've spent the last 45 years working in one capacity or the other to help improve the health and lives of those I've come into contact with.

In dentistry, I was a front-runner in the field of preventative dentistry years before it became popular and the "in" thing for dental practices all across the country. And, I was one of the first dentists in the country to combine a Ph.D. in nutrition and nutritional counseling to my dental practice.

Through this process, I was able to study health and nutrition with some of the giants of the nutritional world ... Linus Pauling ... Emanuel Cheraskin and others ... thereby **gaining profound insights into how nutrition affects your health.**

I had the great fortune to study human energy systems with two geniuses - Jack Schwartz and Dr. Buddy Frumpker. **Many of the energy healing techniques and ideas I learned from Jack and Buddy are incorporated into the Q1000.**

And I had the good luck of being raised as a poor South Dakota farm-boy during the Great Depression. Being raised during the depression without a penny to our name, taught me great common sense and to look at and combine seemingly un-related items in beneficial ways.

That up-bringing and common sense have allowed me to create **QLasers which many call the most profound healing tools they have ever experienced.** Low level laser therapy and QLasers work. We've helped thousands just like you over the past twelve years.

A Literal "Medicine Cabinet" Of Benefits For Me And My Family! ...

we've had our Q1000 system for a few months now and just wanted to let you know that it really gets a daily workout on myself, my wife and eight-year old grandson plus using it on relatives and friends as well. *The Laser Manuals instructions and protocols for so many different applications is a very valuable document;* very simplified yet very effective. I use the laser system daily to treat an **enlarged prostate**. After just two treatments I noticed that my nocturnal visits to the bathroom decreased from five to two and now I may go all night without having to get up. Just yesterday I realized that I went eight hours without having to urinate! By treating my **sciatic nerve** on both sides I no longer have **leg cramps** at night. I've had **tinnitus** for over twenty years and only after a few treatments with the 660 Enhancer the ringing is hardly noticeable. When we feel a **cold** coming on we clear the lymph glands, treat the sinuses, ears and throat and the next day we're good to go. When our grandson gets up in the morning with a **sore throat** he'll immediately treat it with the laser then go to school. He's used the laser for **stomach aches, headaches** and any other pains that he may have with great success. My wife treated her eyes a few times to see if it would help her **Glaucoma** and after a recent exam the Ophthalmologist said that her eyes had improved since the last visit (before we had the laser). My wife was very much against ordering the laser system and now she's the one who uses it the most! Just recently I started having **diarrhea** so I just used the laser on the ascending, descending and transverse colon twice a day and I never experienced any cramping. **The laser system is part of our life now and I don't hesitate to recommend it to anyone.** Thanks to Dr. Lytle for developing such an amazing product.

Carlos Mendoza, Colton, CA

Heart Attack! ...

Just over four weeks ago I had the occasion of utilizing Mode 2 of the Q1000 in an emergency situation. My husband's wonderful 92 year old Mom, Ruby, was experiencing a full-blown heart attack. She was in extremely severe pain in all of the typical places-- chest, left arm, back, jaw. I'm a retired RN who was a supervisor in an intensive cardiac unit so I really had no doubts as to what was happening. Because of her decision not to go the hospital, I was faced with the dilemma of relieving her pain. She had no nitroglycerin or anything else that would stop the pain. I had my QLaser there so **I just turned on Mode 2 for one cycle right over her heart and within a minute or two the pain was gone and so was the heart-attack.** No one "experiments" with heart attacks by just using a laser in the general population as it is a might too risky so I wanted to share this news with you. She pinked up and was pain-free and the heart attack was "mild" all with one Mode 2 cycle of the Q1000. Thanks for your laser we wouldn't be without it. Jeanne Miller

I Give You My Highest Recommendation!

Your laser unit is excellent as well as your customer service, follow-up, and dedication to helping me benefit physically. I've used my Q1000 and the 808 on myself, my family, and my patients for a myriad of things from musculo-skeletal to sinus problems and more. I give you my highest recommendation." Thanks again and God Bless.

Brad Krueger, DC,
Cedar Rapids, IA

Whether or not you'll benefit is a decision that is now in your hands. I've brought you the information. Shown you many testimonials of people like you that wouldn't be without their QLaser. Provided you with the science behind laser therapy.

Now the ball is back in your court. And you'll soon have a decision to make.

The easy thing to do would be toss this report and go about you life in the "normal" way ... handling your pain with dangerous and damaging drugs ... or maybe just deciding to live with it.

Doing the same thing (or nothing) ... accepting the status quo ... is always easy. But one definition of insanity is doing the same thing over and over and over again - but expecting different results.

You've been dealing with your pain in the same way over and over and over again. Are you expecting different results from the same actions?

Low level laser therapy and my QLasers give you a different option - and will produce different results.

**Having the courage
to try something different
may set you free of your pain.**

May help you live a life that is more rewarding and fun. **May just be the best thing you've ever done!**

The good news is that with most of my distributor's, you can try your own QLaser with very little risk, so I hope you'll decide to give QLasers a try.

Sincerely Yours For A Healthy, Happy & Pain Free Life,

Dr. Larry Lytle, DDS, Ph.D.

Nerve Pain Under Control

I have suffered from intense nerve pain and numbness in my legs and feet for the past five years due to a spinal cord injury. I tried several narcotic drugs for the pain, but because of side effects, quickly changed to less powerful drugs - which did not relieve the pain, but only kept it I purchased the Q1000 and began using it immediately. The intense pain was brought under control, and although I'm not pain free, **my need for pain medication has become so minimal, I am taking only an occasional Advil.** I am so pleased with the results the Q1000 has produced.

Ann, Salt Lake City, UT

Tooth Pain ...

There's an in office smile whitening procedure where you put a strong oxidizing agent on the teeth and then activate it with a light for an hour. Once in a while a few people get rather severe discomfort after the procedure. I did one on a gal today that about 45 minutes into the procedure she started having significant pain. She described it as a shooting, pulsing pain that would go from tooth to tooth. I gave her the 660 laser & told her to point it where it hurt. She got immediate relief and asked if she could take it home with her. Reminded me that I need to get my lease contract ready to go. Dr. KL, DDS

Spider Bite or Jelly Fish Sting ...

While on vacation in Mexico last month, I received either a spider bite or jelly fish sting on my upper leg. The site was painful, itchy and the skin blistered in just one day. I used the Q1000 on the sting area just two times and the itching/pain was eliminated and the blisters dried up. Name Withheld by Request

Achy Knees ...

I'm 74 years old and, and that age inevitably comes some "baggage". In my case the cartilage on the inside part of my knees has worn out. It gets pretty painful to walk very far. Climbing and especially descending stairs is real bad. They have told me I am a candidate for partial knee replacements. In the past six months, since I have been using the Q1000 Low Level Laser, and my knees don't ache like they did before lasering and I have good reason to expect that the laser will aid in restoring some of the cartilage in my knees. I'm now thinking, if I feel this good at 74, I might make it to 100. I tell you, with all sincerity, this Low Level Laser Therapy is the closest thing I can imagine to the Fountain of Youth! Robert Haxby, Prescott, AZ

Q10 Affordable for Elderly On Limited Income ...

I have purchased the Q10 ... thank you for making it so affordable to elderly on limited income. I used it to speed up the healing process (2 days) when I got a bad case of the flu. The book, Healing Light, was easy for the lay person to understand. Too bad the pharmaceutical companies write the text books. Our poor doctors are so misinformed they are clueless. I have found the cause of most of my conditions and healed them, to my doctors confusion. Wait till they see me after this. Of course, I tell them that they have to read and research outside the box or they will continue to poison people. God Bless Dr. Larry and the genius of those like him. Angela Marzano, Marysville, WA

QLaser Your Pets Too ...

QLaser your pets! We have been using the LLL for two years. Recently, one of my long-time patients, Paco (12 year old yellow lab) came for a consult on osteoarthritis.

Paco has been on glucosamine and Rimadyl for several years. He has severe bilateral hip dysplasia. Ms. Cole had read the paper that we had written about LLL therapy and wanted to start Paco on the treatment. He received one session and the owner raved about the fact that he actually climbed stairs to go to bed. Paco had not been upstairs for some time. He is currently on a weekly schedule and is a lot more comfortable than when he was on drug therapy alone. Dr. Mark Richards, DVM, Greenland, NH

Dislocated Knee ...

Two years ago I was house boating on Lake Powell when a chance wave rocked the houseboat. It was an awkward position, straddling a railing and my left knee was dislocated. I clearly heard the knee pop out of joint, and immediately a lost the ability to walk or support my own weight. I immediately began using the Q 1000 laser above, below, and all around my knee. By the second day I was able to walk unaided, although I did have some pain and considerable limitation of movement. I believe the laser eliminated the need for surgical reconstruction of my knee, and I will be forever grateful that I had the laser with me and available for immediate treatment. It's little wonder I carry the laser everywhere I go now! Dr. David Winn, Colorado Springs Colorado

Swollen & Painful Back Nerve ...

I was diagnosed with a swollen nerve in my back, and was having trouble walking and was in considerable pain all the time. I had tried physical therapy, which provided minimal relief, but only for short periods of time. I was headed for the operating table when a friend told me about low level laser therapy. After only one treatment I have been pain free since May 2003. William Neumann, Elk Grove Village, IL

Heart Attack ...

Just over four weeks ago I had the occasion of utilizing Mode 2 of the Q1000 in an emergency situation. My husband's wonderful 92 year old Mom, Ruby, was experiencing a full-blown heart attack. She was in extremely severe pain in all of the typical places--chest, left arm, back, jaw. I'm a retired RN who was a supervisor in an intensive cardiac unit so I really had no doubts as to what was happening. Because of her decision not to go the hospital, I was faced with the dilemma of relieving her pain. She had no nitroglycerin or anything else that would stop the pain. I had my QLaser there so I just turned on Mode 2 for one cycle right over her heart and within a minute or two the pain was gone and so was the heart-attack. No one "experiments" with heart attacks by just using a laser in the general population as it is a might too risky so I wanted to share this news with you. She pinked up and was pain-free and the heart attack was "mild" all with one Mode 2 cycle of the Q1000. Thanks for your laser we wouldn't be without it. Jeanne Miller

Horse Cut By Barbed Wire ...

Vet Says "Put Down" But Horse Lives To Produce 3 Foals! This valuable show horse received a severe barbed-wire cut. Infection and gangrene had set in and the Vet, after using all conventional treatment methods, suggested that the horse be "put down" (killed). The wound was lasered daily resulting in rapid closure. After closure the scar was lasered once per week for 3 weeks, with the result being hair growing back in the scar tissue! The horse was able to return to the show ring, and has since produced 3 foals.

Low Back Pain & L2 Disc Problem Solved In 4 Visits!

I had a patient come in the other day that could barely walk as a result of low back and left inner thigh pain. With 24 years of chiropractic experience, I was concerned about putting this patient on the exam table for fear that she might not be able to get back up. So I decided to laser her inner left thigh using the Q1000, and within six minutes she said that the pain was reduced by 50%. Now able to complete the examination, I found an L2 disc problem and used the 808 Enhancer on it (no adjustments were made on this first visit). She came back the next day and indicated that the pain was 85% better and with two additional visits (four days total), her condition was completely resolved. Dr. Jay Burton, Hillsboro, OR

Low Level Laser Therapy "Just As Good As Advertised!"

I came to Dr. Austin with chronic neck, back, hip and shoulder pain. I didn't know what to expect from low level laser therapy, but found it to be just as good as advertised. I never thought after 30 years of chronic pain, that I would ever be able to do normal everyday activities again, without feeling like I had thrown something out of alignment! Now I can exercise the muscles I need to, to build up strength in them. I can see additional improvement with each treatment and now have a goal that seems very possible to reach. I am truly amazed with the results I've experienced with LLLT! – Marty H., Virden, IL, patient of Dr. Todd Austin, DC

My son had a bicycle accident and smashed his front teeth and lip. His teeth and bone were pushed back 1/2 inch which required surgical repositioning and six stitches on his lip. The first two days, he took pain pills, however, as a backup I used the Resonator Laser daily. After the second day, we stopped the pain pills and he had NO PAIN! The laser seemed to control the pain AND speed the healing. After just four days, there is no pain, no swelling, no black and blue marks, the scab has already come off, and new tissue is appearing! Dr. K.L., SD

Leg Broken In 12 Places While Riding Dirt Bike ...

The surgeon initially attempted to utilize an external fixation device in order to stabilize the leg and allow the bone to heal. Unfortunately after 3 months, the bone still wasn't healed and I went back in for a second surgery to have an internal fixation device attached. After the second surgery, the leg was better, but still wasn't healing completely and was causing a serious and damaging energy drain. People that knew and loved commented that I wasn't the same person as just 4 months earlier. While looking for solutions to my problem, I came across the Q Series low level laser products. Only 10 days after I started using my lasers I absolutely cannot believe the healing that has occurred in my leg! I highly recommend the Q Series products to any individual. Sincerely, Dr. William Cunico, DC, Raton, NM.

Broken Rib Almost Ruins Cruise Vacation ...

My husband broke a rib a week before we were to leave on a Hawaiian cruise. He was in great pain, and didn't know if he would be able to leave in a few days. He began using our Q10 laser daily for 30 minutes on his broken rib. We took it with us, and he continued to use the laser daily. There was no problem in taking it through the airline screening of our carry on luggage. In three weeks he was totally pain free, and couldn't even tell that he had broken his rib. We attribute the speedy healing to using our laser. We will always take our laser with us on vacation from now on in case we need it. Thank you, Karen Berg, Eugene OR

Severe Gastritis & Colitis ...

I had a severe case of gastritis and took several weeks of a well known antacid that healed, but commonly triggered colitis. I had powerful diarrhea and could not leave home, and my doctor said there was nothing he could do ... just live with it. I lasered the area of the colon with my Q1000, five 3-minute sessions every other day for fourteen days. The laser treatment healed it and it has not returned in several months. Albert Rysavy, Minneapolis, MN

Clinical Research Study Summaries

Effectiveness of Helium-Neon Laser Irradiation On Viability and Cytotoxicity of Diabetic-Wounded Fibroblast Cells

Photomedicine & Laser Surgery, Vol 25, 6, 2007, PP. 474-481

Conclusions: wounded diabetic WS1 cells irradiated to 5 J/cm² showed increased cellular repair when irradiated with adequate time between irradiations, allowing time for cellular response mechanisms to take effect.

Effect of Lower-Level Laser Therapy on Rabbit Tibial Fracture.

Photomedicine & Laser Surgery, Vol 25, 6, 2007, PP. 487-494

Conclusions: the study suggests LLLT may accelerate the process of fracture repair or cause increases in callus volume and BMD (bone mineral density), especially in the early stages of absorbing the hematoma and bone remodeling.

Nd:YAG and Diode Laser in the Surgical Management of Soft Tissues Related to Orthodontic Treatment.

Photomedicine & Laser Surgery, Vol 25, 5, 2007, PP. 381-392

Conclusion: the use of these wavelengths of laser energy was a noticeable aid in the surgical management of soft tissues before or during orthodontic treatment. The benefits of laser treatment include reduced bleeding during surgery with consequent reduced operating times and rapid postoperative hemostasis, thus eliminating the need for sutures. The lack of need for anesthetics and sutures, as well as improved postoperative comfort and healing, make this technique particularly useful for very young patients.

Laser Phototherapy (780 nm), a New Modality in Treatment of Long-Term Incomplete Peripheral Nerve Injury: A Randomized Double-Blind Placebo-Controlled Study.

Photomedicine & Laser Surgery, Vol 25, 5, 2007, PP. 436-442

Conclusions: the analysis of motor function during the 6-month follow-up period compared to the baseline showed statistically significant improvement in the laser-treated group compared to the placebo group. This pilot study suggests that in patients with long-term peripheral nerve injury non-invasive 780-nm laser phototherapy can progressively improve nerve function, which leads to significant functional recovery.

Low-Level Laser Therapy (GaAs = 904 nm) Reduces Inflammatory Cell Migration in Mice with Lipopolysaccharide-Induced Peritonitis.

Photomedicine & Laser Surgery, Vol 25, 4, 2007, PP. 245-249

Conclusions: Low level laser therapy (904 nm) can reduce inflammatory cell migration in mice with LPS induced peritonitis in a dose-dependent manner.

The Level Laser In Treatment of Soft Tissue

Knee Lesion E. Popova Ramova, Dept. of Physical Therapy, Military Hospital-Skopje

20 patients were treated with low level laser (LLL) through the skin for 10 days at 20 different application points. Dose was 30 joules using a 10 mW 730 nm wave. Conclusion: the patients with soft tissue lesion of the knee were successfully treated 85% with full stability.

Low Energy Photonic & Laser Therapy For Effective Treatment of Frozen Shoulder

Salansky, Millennium Health Institute, Toronto, Canada

This approach is based on treating underlying tissue pathologies - chronic inflammation, tissue ischemia, tendon tears and scarring, and tender/trigger points. A series of case reports of frozen shoulder treated with a multi-modality systems (including 810 nm laser and 660-8880 nm LED's) created the following results: -- All patients were able to discontinue pain medication (including narcotics and NSAIDs); -- Pain as measured by VAS (0-10) has improved from a mean value of 7.8 (range 5.5 to 10) to 2.1 (range 0 to 4.3); -- Flexion ROM has improved from a mean of 48% of normal value to a mean of 81% of normal value; -- At a follow-up of 3 months to 3 years, patients have preserved 70-100% of their initial improvements.

Applying Low Level Laser Therapy (LLLT) For Treatment of Migraine

Soheila Mokmeli, Laser Clinic

of Milad Hospital, Tehran, Iran

Results: PN & drug consumption decreased dramatically in the laser group. In addition, PN in the laser group was lower than the control group after 6 months.

Low Level Therapy (LLLT) On Knee Osteoarthritis: A Clinical Study On 386 Patients

Soheila Mokmeli, Laser Clinic of Milad

Hospital, Tehran, Iran

Results: there was significant difference between pain number, morning stiffness, walking time, supra patellar size, and night pain before and after LLLT.

Comparing Low Level Laser Therapy & Physiotherapy On Knee Osteoarthritis (OA)

Laser Clinic of Milad Hospital, Tehran, Iran

Results: laser therapy and physiotherapy both reduced pain number and increased range of motion, but laser therapy's effects stayed for a longer time and the patients had higher satisfaction levels than with physiotherapy.

Clinical Evaluation of Low Level Laser On Inflammatory Signs & Degree Of Lameness In Horses

Dept. of Clinical Science, Orumyeh Iran

Results: the laser group had 50% accelerated healing, and significant improvements in pain, swelling, tenderness, heat and functional recovery. Lameness was reduced/eliminated in 28 days with the laser group, whereas it persisted for the full 60 days in the control group.

Laser Phototherapy In Nerve Regeneration

Tel Aviv Medical Center

This study showed that in long-term peripheral nerve injured patients, low power laser irradiation can progressively improve peripheral nerve function, which leads to statistically significant functional recovery.

Laser Phototherapy In Leg Ulcers

University of Medicine and Pharmacy & Laser Clinic, Iasi, Romania

Results: group one achieved a significant improvement of the general health status in 62% of the cases, compared to only 16% in the control group. Laser phototherapy reduced the average ulcer surface from 70.44 mm to 15.72 mm compared to a mean decrease from 69.12 mm to only 44.56 mm in the control group. The complete healing in 59.01% of the ulcers in the laser group compared to only 27.11% in the control group.
